

PLACEMENT HUB 2027

PHASE 1 FINAL MOCK — DAY 16

Official Answer Key & Detailed Explanations

EXAM DETAILS

Exam Window	21–22 August 2026
Questions	20
Duration	25 minutes
Passing Marks	50%
Sections	Quantitative Aptitude • Logical Reasoning • Verbal Ability • Workplace Skills

VERIFIED ANSWER KEY

Question	Correct Answer
Q1	A — 108
Q2	C — 5 hours
Q3	C — 11 years
Q4	A — ■2,070
Q5	C — 70%
Q6	D — E
Q7	B — Monday P, Tuesday Q, Wednesday S, Thursday R
Q8	B — Aunt
Q9	C — All managers are employees
Q10	C — Both statements together are sufficient
Q11	B — Technical knowledge alone may not be sufficient for workplace success
Q12	A — Q-P-R-S
Q13	A — Practical
Q14	B — Each candidate is required to bring an identity card.
Q15	A — managed to complete the project on time
Q16	C — Talk to the teammate privately and understand whether there is a problem.
Q17	B — Say you do not know the exact answer but explain the related concept you understand.
Q18	C — The critical production bug
Q19	C — Understand the requirement and assess its effect on time, cost and existing functionality.
Q20	C — Acknowledge the idea, evaluate its advantages, and respectfully explain your alternative.

DETAILED EXPLANATIONS

Q1. A — 108

45% of 800 = 360 technical employees. 30% of 360 = 108. Therefore the answer is 108.

Q2. C — 5 hours

First 120 km: $120 \div 60 = 2$ hours. Remaining 120 km: $120 \div 40 = 3$ hours. Total = $2 + 3 = 5$ hours.

Q3. C — 11 years

Six members have $6 \times 4 = 24$ years of total experience. Seven members have $7 \times 5 = 35$ years. The leader has $35 - 24 = 11$ years.

Q4. A — ■2,070

■2,000 increased by 15% becomes ■2,300. A 10% discount on ■2,300 is ■230. Final price = $■2,300 - ■230 = ■2,070$.

Q5. C — 70%

Total placements = $80 + 60 + 40 + 20 = 200$. CSE + ECE = 140. $140 \div 200 \times 100 = 70\%$.

Q6. D — E

The order is $E \rightarrow A \rightarrow B \rightarrow D \rightarrow C$ because E is ahead of A, A ahead of B, B ahead of D, and D ahead of C. Therefore E is at the extreme front.

Q7. B — Monday P, Tuesday Q, Wednesday S, Thursday R

P is before R, Q is not Monday, and S must immediately follow Q. Option B satisfies all three conditions.

Q8. B — Aunt

Priya is Rahul's sister and Rahul is Kiran's father. Therefore Priya is Kiran's aunt.

Q9. C — All managers are employees

This conclusion is directly stated in the first statement. The second statement does not prove that any developer is a manager.

Q10. C — Both statements together are sufficient

$N > P$ and $P > M$ together imply $N > P > M$, so $N > M$. Neither statement alone is sufficient.

Q11. B — Technical knowledge alone may not be sufficient for workplace success

The passage says companies evaluate technical knowledge together with communication, teamwork and problem-solving. Therefore technical knowledge alone may not be enough.

Q12. A — Q-P-R-S

The application first produces errors (Q), the team identifies the root cause (P), tests the fix (R), and then resolves the issue (S).

Q13. A — Practical

Pragmatic means practical or focused on realistic solutions.

Q14. B — Each candidate is required to bring an identity card.

'Each candidate' is singular, so the singular verb 'is' is correct.

Q15. A — managed to complete the project on time

The phrase correctly expresses successful completion despite technical difficulties.

Q16. C — Talk to the teammate privately and understand whether there is a problem.

A professional response is to understand the reason first rather than blame, expose or immediately remove the teammate.

Q17. B — Say you do not know the exact answer but explain the related concept you understand.

This demonstrates honesty, self-awareness and relevant knowledge without pretending to know something that you do not.

Q18. C — The critical production bug

A critical production bug has the highest urgency and potential impact, so it should be prioritized before routine or low-priority work.

Q19. C — Understand the requirement and assess its effect on time, cost and existing functionality.

A late feature request should first be analyzed for scope, schedule, cost and technical impact before implementation is promised.

Q20. C — Acknowledge the idea, evaluate its advantages, and respectfully explain your alternative.

This demonstrates active listening, critical thinking, respectful disagreement and professional communication.

NEXT PLACEMENT HUB PHASE ■

From Phase 1 Aptitude → Practical Placement Preparation

1. Aptitude: Concept → Formula → Solved Example → Practice → Test

Before each aptitude quiz, teach the relevant concept and formula, show solved examples, then provide fresh placement-style problems. Reduce repeated questions and gradually increase difficulty.

2. Programming Foundation

Continue C, C++, Java and Python as the common programming foundation. Students should understand basic programming logic in all four while developing deeper strength in one primary language.

3. Weekly Practical Projects

Use small projects such as an expense tracker, quiz application, student management system, inventory system, automation tool or simple team application. Projects should progressively require more problem solving.

4. Communication & Confidence

Practice self-introduction, one-minute speaking, group discussions, technical explanations, presentations and mock interviews. Focus on confidence, clarity and improvement.

5. Teamwork & Student Parliament

Use three-member teams for collaborative projects. Student Parliament can coordinate aptitude, coding, communication, career/domain, entrepreneurship and student activities while giving students leadership opportunities.

6. Domain Exploration

After the common foundation, expose students to Software/Web, AI/ML, Data, Cybersecurity, Embedded/IoT, Robotics, Cloud/DevOps, UI/UX and Entrepreneurship. Then allow students to choose a deeper specialization.

7. Placement Simulation

The next major checkpoint can simulate a real placement process: aptitude screening → coding/problem solving → group discussion → technical interview → HR/self-introduction → individual feedback and improvement plan.
